Index to

The Welding Journal

Volume 32—1953

Published by the American Welding Society, 33 West 39th Street, New York 18, N. Y.

(a) The Welding Journal

This part includes general technical articles, papers presented before Section and National meetings, articles for the practical welder and designer, news, biographical items, current welding literature and advertising.

Page allocation by issues

January	1– 96	July	579–676
February	97–198	August	677–796
March	199–286	September	797–916
April	287–384	October	917–1050
May	385–482	November	1051–1148
June	483–578	December	1149–1250

(b) Welding Research Supplement

This section includes the reports of the Welding Research Council, critical digests of the literature, reports of the Project Committees and research reports of industry.

Page allocation by issues

January	1-s– 64-s	July	305-s–352-s
February	65-s–112-s	August	353-s–416-s
March	113-s–160-s	September	417-s–480-s
April	161-s–208-s	October	481-s–528-s
May	209-s–256-s	November	529-s–576-s
June	257-s–304-s	December	577-s–624-s

(*a*) THE WELDING JOURNAL

Subject Index

Adams Lecture—On the Welding of Titanium Alloys—C. B. Voldrich, 497–515.
Aircraft, Jet Engine Components, Shielded-Arc Welding Processes for —K. H. Koopman, 103–115.
Aircraft—Light-Gage Alloys, Fusion Welded—J. T. Maloney, 966–969.
Aircraft—Stainless Steel Welded—D. O. Samuelson, 603–611.
Alloy Steel, Oxygen Cutting of—F. C. Saacke, 19–30.
Aluminum Alloys—Some Considerations on Weldability of—J. Koziarski, 970–986.
Aluminum, Aluminum Alloys and Steel, Spot Welding of—W. J. Wilson, 1175–1180.
Aluminum Containers, Vacuum Tightness of Welded and Brazed—Mike A. Miller and Allen S. Russell, 116–118.
Aluminum—Joining of Other Metals—Mike A. Miller, 730–740.
Aluminum—Quality Control in Spot Welding of—Floyd H. Matthews, 1181–1194.
Arcs—A Comparison of Shielding Mixtures for Gas-Shielded Arc Welding—J. W. Cunningham and H. C. Cook, 834–841.
Armor Plate, Oxygen Cutting of—F. C. Saacke, 19–30.
Automatic Field Welding of Girth Joints of Large Storage Tanks—Perry C. Arnold, 399–406.

Backing Rings in Piping—Elimination of, by Inert-Arc Welding Technique—R. A. Mueller and W. B. Root, 205–216.
Brazed Aluminum Containers—Mike A. Miller and Allen S. Russell, 116–118.
Brazing-Advanced Information for the Operator—E.F. Davis, 293–298.
Brazing of Stainless Steel—R. C. Jewell, 331.
Brazing of Titanium—N. A. DeCecco and John M. Parks, 1071–1081.
Bridge Construction—Development of—Nathan W. Morgan, 923–927.
Bridges and Buildings—Designs of Welded Steel—F. L. Plummer, 489–496.
Bridge—Welded Arch, Over the Rio Blanco River in Mexico—Thomas C. Kavanagh and Camilo Piccone, 1195–1202.
Buildings and Bridges—Designs of Welded Steel—F. L. Plummer, 489–496.

Carbide Segregation in 1¼ Cr-½Mo Steel Pipe Welded Joints—I. A. Rohrig and H. S. Blumberg, 815–822.
Ceramic Coated Alloys—Repair Welding of—J. M. Riordan, 1160–1166.
Chromium-Molybdenum Steel Pipe—Arc Welding of—Jay Bland, 803–814.
Coliseum—Allen County War Memorial—Ralph E. Coblentz, 320–323.
Cone Arc Welding—P. Patriarca and G. M. Slaughter, 597–602.
Control Operation—D. C. Wright, 328–331.
Cr-Mo Steel Pipe Joints—Carbide Segregation in—I.A. Rohrig and H. S. Blumberg, 815–822.
Cupro Nickel, 90-10 Inert Arc Welding of—Lowell H. Hawthorne, 31–36.
Cutting—Recent Developments in Powder Processes—R. S. Babcock, 986–991.

Dissimilar Metals—Aluminum Joined to Other Metals—Mike A. Miller, 730–740.
Dissimilar Metals—Resistance Welded to Magnesium for Electrical Connections—Paul Klain and H. W. Croisant, 217–224.
Ductile Iron—Joining by Several Arc Welding Methods—T. E. Kihlgren and H. C. Waugh, 947–956.

Earth Mover Components—Manual Hidden Arc Halves Time—William T. Potter, 324–328.
Electrode—Stranded for Aircomatic Welding—H. Robinson and Harry C. Cook, 692–702.
Electrodes—Low Hydrogen Welding—J. D. Fast, 516–520.
Expansion—Magnaflux Quality Control of Pipe-Line Welds—George L. C. Dehn, 721–727.

Fillerarc Welding Process—R. W. Tuthill, 703–707.
Filter Glasses—Relation Between Welding Current and Appropriate Transmission—T. Rosskopf, 689–691.
Flame Cutting for Machinery Weldments—Automatic—Howard B. Cary, 957–965.
Flame Hardening of Large Diameter Thin-Wall Cylindrical Shells—Gustave A. Weber, 37–43.

Hard Facing, Selection and Evaluation of Methods of—J. J. Barry, 119–126.
Heat—The Nature of, in the Welding Process—Robert. T. Howard, 127–131.
Human Element in Welding—David P. O'Connor, 727–729.
Human Element in Welding—Richard C. Wiley, 1066–1070.

Inert Arc Welding—Gases Produced by—John J. Ferry and Gordon B. Ginther, 396–398.

Inert Arc Welding of 90-10 Cupro-Nickel—Lowell H. Hawthorne, 31–36.
Inert-Arc Welding Technique for Eliminating Backing Rings in Piping—R. A. Mueller and W. B. Root, 205–216.
Inert-Gas Metal-Arc Welding of Mild and Low-Alloy Steel—Frank G. Harkins, 683–689.
Inert Gas-Shielded Arc Welding—Comparison of Shielding Mixtures for—J. W. Cunningham and H. C. Cook, 834–841.
Inert Gas-Shielded Arc Welding—Stranded Electrode for—H. Robinson and Harry C. Cook, 692–702.
Inert Gas-Shielded Arc Welding of Stainless Steel Tubing—P. Patriarca and G. M. Slaughter, 597–602.
Inert Gas-Shielded Metal-Arc Welding Process—R. W. Tuthill, 703–707.
Inert-Gas-Shielded Metal-Arc Welding Process—W. H. Wooding, Part I—299–312, Part II 407–423.
Inert-Tungsten Arc Welding of Stainless Steel Piping—F. J. Pilia, 1167–1174.
Inspection Techniques for Quality Welding—Lew Gilbert and William B. Bunn, 614–619.
Jet Engine Components, Shielding Arc-Welding Processes for—K. H. Koopman, 103–115.

Light-Gage Alloys—Fusion Welding of—J. T. Maloney, 966–969.
Low-Hydrogen Welding Rods—J. D. Fast, 516–520.
Low-Temperature Service—Welding for—Robert W. Bennett, 1089–1097.

Magnaflux for Quality Control of Pipe-Line Welds—George L. C. Dehn, 721–727.
Magnesium—Resistance Welded to Dissimilar Metals for Electrical Connections—Paul Klain and H. W. Croisant, 217–224.
Magnesium Spot Welded with Three-Phase Low-Frequency Equipment—Paul Klain, D. L. Knight and J. P. Thorne, 7–18.
Maintenance, Wear and Operation Problems in—Frank J. Gaydos, 44–49.
Maintenance Welding—Quarry—J. Dean Davidson, 992–996.
Metallurgical Effects of Oxygen Cutting Alloy Steel (Armor Plate)—F. C. Saacke, 19–30.
Molybdenum—Some Recent Advances in the Welding of—W. H. Kearns, H. B. Goodwin, E. Eichen and D. C. Martin, 1082–1088.

Nodular Cast Iron—Arc Welding of Ferritic and Austenitic—J. Sohn, W. Boam and H. Fisk, 823–833.
Nodular Iron Joining by Several Arc Welding Methods—T. E. Kihlgren and H. C. Waugh, 947–956.
Nonferrous Inert Arc Welding of 90-10 Cupro Nickel—Lowell H. Hawthorne, 31–36.

Oxygen Cutting Alloy Steel (Armor Plate)—F. C. Saacke, 19–30.

Penstock Test Fracture Repaired by Welding—P. J. Bier, 313–319.
Pipe—Arc Welding of Low Chromium-Molybdenum Steel—Jay Bland, 803–814.
Pipe-Line Welds—Magnaflux for Quality Control of—George L. C. Dehn, 721–727.
Pipe, Stainless Steel—Inert-Tungsten Arc Welding of—F. J. Pilia, 1167–1174.
Pipe Welded Joints—Carbide Segregation in $1\frac{1}{4}$ Cr-$\frac{1}{2}$ Mo Steel—I. A. Rohrig and H. S. Blumberg, 815–822.
Piping—Inert-Arc Welding Technique for Eliminating Backing Rings—R. A. Mueller and W. B. Root, 205–216.
Powder Cutting Processes—Recent Developments in—R. S. Babcock, 986–991.

Practical Welder and Designer
Aircraft—Aft Frames, 527—529.
Aluminum Trailers, 333–334.
Automobile Repair—L. F. Lillard, 332.

Better Bridges By-Pass Tougher Traffic Tangles, 627–630.
Boiler Tubes Become Gate Frames, 334.
Braze Welding to the Rescue—L. M. Smith, 1000.
Brazing Methods for Refrigeration Units—A. L. Johnson, 235–237.

Carbide Tool Brazing, 138.
Copper Vessels, Production Welding of—52.
Copper Welding by Use of Heliwelding—H. A. Huff, Jr., 625–626.
Cosmotron, Brookhaven, 145–147.
Cost—How Proper Design of Steel Saves Material—50–52.
Cutting Away Frozen Nuts and Rivets—D. K. Feinthal, 745.
Cutting Clinic—P. F. McGonagle, 132–133.

Design—How Proper Design in Steel Saves Material—50–52.
Design—Load-Carrying Capacity of Fillet Weld Connections—F. Koenigsberger and H. W. Green, 859–863.
Desks, Welded—Cuts School Expansion Costs, 744–745.

Expansion and Contraction—J. A. Fluharty, 620–621.
Expansion and Contraction During Welding—B. H. Higgs, 230–231.
Expansion and Contraction Effects—L. M. Amburgey, 142–144.

Flame Hardening Truck Center Castings, 237.
Forging Press, World's Largest, 622–624.
Forming and Welding Machine Combination—John Maloney, 231.

Gondola Floors—Submerged Arc Welding of, 741.
Groove Cutting for the Shop—R. G. Householder, 232–234.

Handrails Made From Scrap—G. M. Priske, 863.
Hard Facing—H. O. Jones, 746.
Hard Facing Pump Parts, 529.
Heliarc Welding Costs Cut by Timer, 742–743.

Jigs for Welding Pipe—H. J. Adolf, 133.

Maintenance Welding—Worn Drum Problems, 857–858.
Minesweeper Stacks—Welding Time Cut, 624.

Nickel Pipe—Heliarc Welding Helps Fabrication, 743.
Nonferrous Tubing—High-Speed Welding of, 1098–1099.
Nuts and Rivets Cut Away—D. K. Feinthal, 745.

Pipe Cutting in Welding, ABC's of—D. A. Spaulding, 1100–1101.
Pipe, Jigs for—H. J. Adolf, 133.
Pipe Lines—Aluminum for Oil Industry, 740–741.
Production Welding Large Copper Vessels—52.
Production Welding with Inert Metal Arc, 139.
Production of Parts During Welding—E. E. Olson, 632.

Refrigeration Units—Brazing Methods for—A. L. Johnson, 235–237.
Reinforcing Bars, Concrete—Thermit Welded, 850–853.
Repair of a Tubular Handle—F. C. Geibig, 49.
Resistance Welding Handling Devices, 144.
Road Building Equipment Unionmelt Welded, 626.

Safety—Potential Hazards from Use of Thoriated Tungsten Electrodes, 134.
Salvage Materials Make "Handy-Andys," 845.
Sheet Steel—Hints for Welding of—Y. Hale, 335.
Shovel Reclaimed—J. X. Merkt, 864–865.
Spot Welding Technique, Double Speed, 148–149.
Spot Welding with Rotating Electrode, 630.
Stainless Steel Heater Tanks Saved by Welding—G. Bethel, 147.
Steel Developments at Lukens Steel, 854–857.
Structural—All-Welded Factory Extensions, Fairchild Aircraft—C. L. Kreidler, 846–849.
Structural Design—Load-Carrying Capacity of Fillet Weld Connections—F. Koenigsberger and H. W. Green, 859–863.
Structures, Welded, Case Reports on—Ned H. Abrams, W. A. Repp, J. R. Pelich, Emerson C. Scholer and David R. Graham, 135–138.
Stud Welding Used in Farm Machinery, 631–632.
Superweapon, 139–141.

Tailors in Steel to Canadian Industry—I. MacFadden, 997–999.
Thoriated Tungsten Electrodes, Potential Hazard from, 134.
Timer Cuts Heliarc Welding Costs, 742–743.
Thermit Welding of Concrete Reinforcing Bars, 850–853.
Trailers—Aluminum, 333–334.
Tubing—High-Speed Welding of Nonferrous, 1098–1099.

Pressure Vessels—Welded Design for High-Pressure Gas Compressor Bottles—C. Wurgler, 612–613.
Production Welding of Steels by Gas-Shielded Arc Welding—C. J. Sullivan, 391–396.

Quality Control in Spot Welding Aluminum—Floyd H. Matthews, 1181–1194.
Quality Control of Resistance Welding by Statistical Methods—J. F. Radford and R. K. Waldvogel, 521–526.

Repair Welding of Ceramic Coated Alloys—J. M. Riordan, 1160–1166.
Resistance Welding Applications in Aircraft Stainless Steels—D. O. Samuelson, 603–611.
Resistance Welding of Dissimilar Metals to Magnesium for Electrical Connections—Paul Klain and H. W. Croisant, 217–224.
Resistance Welding—Quality Control by Statistical Methods—J. F. Radford and R. K. Waldvogel, 521–526.

Russian Welding Practice—Carl A. Zapffe, 842–845.

Safety—Relation Between Welding Current and Appropriate Transmission of Filter Glasses—T. Rosskopf, 689–691.
Ship Repair—Tricky Problems in Welded—Milton Forman, P. E., 715–720.
Silver Alloy Brazing of Stainless Steel—R. C. Jewell, 331.
Spot Welding Aluminum—Quality Control in—Floyd H. Matthews, 1181–1194.
Spot Welding of Auminum, Aluminum Alloys and Steel—W. J. Wilson,1175–1180.
Spot Welding of Magnesium with Three-Phase Low-Frequency Equipment—Paul Klain, D. L. Knight and J. P. Thorne, 7–18. Discussion by J. J. Riley, 323.
Spot Welding of Titanium-Carbon Alloys—E. F. Holt, F. H. Vandenburgh and N. L. McClymonds, 1057–1066.
Stainless Steel Piping—Inert-Tungsten Arc Welding of—F. J. Pilia, 1167–1174.
Stainless Steel—Resistance Welding Application in—for Aircraft—D. O. Samuelson, 603–611.
Stainless Steel—Silver Alloy Brazing of—R. C. Jewell, 331.
Stainless Steel Tubing—Inert-Gas-Shielded Arc Welding of—P. Patriarca and G. M. Slaughter, 597–602.
Steel Mill, Maintenance Wear and Operation Problems In—Frank J. Gaydos, 44–49.
Steel Strengthened with Aluminum Nitride—K. A. Krekeler, 42.
Storage Tanks—Automatic Field Welding of Girth Joints—Perry C. Arnold, 399–406.
Stress Corrosion Cracking of Welds, 611.
Structural—Allen County War Memorial Coliseum—Ralph E. Coblentz, 320–323.
Structural Steel—Weldability of—E. L. Erickson, 1155–1159.
Structural—Unity in Welded Steel Construction—R. S. Hale, 225–229.
Structures—Continuous Welded—W. S. Atkins and E. M. Lewis, 928–946.

Tanks—Automatic Field Welding of Girth Joints of Large Storage—Perry C. Arnold, 399–406.
Teaching Welding—Richard C. Wiley, 1066–1070.
Titanium Alloys—On the Welding of, 1952 Adams Lecture—C. B. Voldrich, 497–515.
Titanium—Brazing of—N. A. DeCecco and John M. Parks, 1071–1081.
Titanium-Carbon Alloys—Spot Welding of—E. F. Holt, F. H. Vandenburgh and N. L. McClymonds, 1057–1066.
Titanium Welds—Restoration of Ductility in—A. J. Rosenberg, E. F. Hutchinson and S. Weiss, 708–714.
Training—Problems Involving the Human Element in Welding—David P. O'Connor, 727–729.

Weldability of Structural Steel—E. L. Erickson, 1155–1159.
Welding Processes—Factors in the Selection of—John J. Chyle, 585–596.

(*b*) WELDING RESEARCH SUPPLEMENT

Subject Index

Aircraft Steels, Studies of the Crack Sensitivity of; Discussion—J. Koziarski, 157-s to 159-s; Authors' Reply, 159-s; Discussion—E. C. Rollason and R. R. Roberts, 159-s to 160-s; Authors' Reply, 160-s.

Aluminum Alloys, Semiautomatic Inert-Gas Metal-Arc Welding of—Charles T. Gayley, Joseph R. Girini and Walter H. Wooding, 179-s to 190-s; Discussion—H. Udin, 385-s to 386-s; Authors' Reply, 386-s.

Aluminum Alloys, The Welding of Thick Plates of High-Strength—D. C. Martin, M. I. Jacobson and C. B. Voldrich, 161-s to 171-s.

Arc Studies—Control of Penetration and Melting Ratio with Welding Technique—Clarence E. Jackson and Arthur E. Shrubsall, 172-s to 178-s.

Arcs, High-Current Tungsten, in Argon, Helium and Their Mixtures—Merrill Skolnik and T. B. Jones, 55-s to 64-s.

Argon, Helium, Tungsten Arcs in—Merrill Skolnik and T. B. Jones, 55-s to 64-s.

Biaxial Fatigue Properties of Pressure Vessel Steels—C. E. Bowman and T. J. Dolan, 529-s to 537-s.

Bridge Over the Rhine at Dusseldorf—352-s.

Bridge, The Corneille, in Rouen—J. Velitchkovitch and A. Schmid, 131-s to 133-s.

Brittle Failure Research, Evaluation of—E. F. Sweeney, 1-s to 13-s.

Brittle Failures—Investigation of Structural Failures of Welded Ships—Morgan L. Williams and George A. Ellinger, 498-s to 527-s.

Brittle Fracture, Initiation and Propagation of, in Structural Steels; Discussion—Bernhard Persson, 301-s; Authors' Reply, 301-s.

Bulge Test, Explosion, Mechanics of the—Carl E. Hartbower, 333-s to 341-s.

Carbon Dioxide and Nitrogen Atmospheres, Effect of, on Arc Welding—F. W. Sowa, W. C. Truckenmiller and L. E. Wagner, 619-s to 624-s.

Charpy V-Notch Specimens of Ingot Iron, Deformation Twinning in—G. W. Geil and N. L. Carwile, 273-s to 282-s.
Chromium Recovery During Submerged Arc Welding: Discussion—Frank G. Harkins, 111-s to 112-s.
Contact Resistance, Multiple—William B. Kouwenhoven and Donald R. Hagner, 432-s to 440-s.
Copper in Type 347 Weld Metal—R. P. Wentworth, 347-s to 351-s.
Corrosion Influence on the Cracking of Pressure Vessels—H. R. Copson, 75-s to 91-s.
Cracking Tendency of Steels and Electrodes, The Cylinder Specimen for Testing—Paul Werthebach, 302-s.
Cracking Thermal Test Simulates Practical Welded Joints—C. L. M. Cottrell, 257-s to 272-s.

Design of Pressure Vessel Heads, Interpretive Report on—31-s to 52-s.
Distortion and Shrinkage Stresses in the Welded and Riveted Hulls of a Tanker and a Cargo Vessel—R. Spronck and J. J. L. van Maanen, 474-s.

Electrodes and Heat Treatments, Effects of, on Mild Steel Weldments—Ernest F. Nippes and Alexander Lesnewich, 353-s to 374-s.
Explosion Bulge Test, Mechanics of the—Carl E. Hartbower, 333-s to 341-s.

Fatigue, Biaxial, Properties of Pressure Vessel Steels—C. E. Bowman and T. J. Dolan, 529-s to 537-s.
Fatigue—Pressure Vessel Steels in the Plastic Range—J. H. Gross, S. Tsang and R. D. Stout, 23-s to 30-s.
Fatigue Properties of Weld Metal—L. A. Harris, R. B. Matthiesen and N. M. Newmark, 441-s to 453-s.
Fatigue—Stress Concentrations in Steel Under Cyclic Load; Discussion—N. H. Polakowski, 222-s to 223-s; Author's Reply, 223-s, 256-s.
Fatigue Tests of Steel Girders—Hans Bühler, 52-s to 54-s.
Flame-Cut High-Tensile Steel, Sandblasting and Annealing to Improve—A. Erker, 402-s, 412-s.
Flash Welding of Steel, Temperature Distribution During—E. F. Nippes, W. F. Savage, S. S. Smith, J. J. McCarthy and G. Grotke, 113-s to 122-s.

Gas Flow Requirements for Inert-Gas-Shielded Arc Welding—Glenn J. Gibson, 198-s to 208-s.
Girders, Fatigue Tests of—Hans Bühler, 52-s to 54-s.

Hammer and Hydrostatic Tests Applied to Pressure Vessels—303-s to 304-s.
Hatch Corner Design, Considerations of Welded—316-s to 324-s.
Heat-Treatment Effects on Transition Temperature of a Ship Steel—E. B. Evans and L. J. Klingler, 417-s to 431-s.
Heat Treatments and Electrodes, Effects of, on Mild Steel Weldments—Ernest F. Nippes and Alexander Lesnewich, 353-s to 374-s.
Helium, Argon, Tungsten Arcs in—Merrill Skolnik and T. B. Jones, 55-s to 64-s.
Hydrostatic and Hammer Tests Applied to Pressure Vessels—303-s to 304-s.

Impact Transition Temperature, Effect of Specimen Geometry on—R. S. Zeno and J. L. Dolby, 190-s to 197-s.
Impact Transition Temperatures of Structural Steel Beams with Butt-Welded Splices—William J. Krefeld and George B. Anderson, 538-s to 576-s.
Inert Arc Gas Welding of Titanium Alloys—J. J. Chyle and I. Kutuchief, 65-s to 73-s.
Inert-Gas Metal-Arc Welding of Aluminum Alloys, Semiautomatic—Charles T. Gayley, Joseph R. Girini and Walter H. Wooding, 179-s to 190-s; Discussion—H. Udin, 385-s to 386-s; Authors' Reply, 386-s.
Inert-Gas-Shielded Arc Welding, Gas Flow Requirements for—Glenn J. Gibson, 198-s to 208-s.

Low-Alloy Steel Weldability—Decomposition of Austenite in Low Carbon, Ni, Mo, Steel Weld Metal—E. F. Bailey and W. J. Harris, Jr., 134-s to 138-s.
Low-Hydrogen Electrodes, Effects of, on Mild Steel Weldments—Ernest F. Nippes and Alexander Lesnewich, 353-s to 374-s.
Low-Hydrogen Low-Temperature Bend Test Properties of Bead-on-Plate Welds—L. A. Harris, R. B. Matthiesen and N. M. Newmark, 585-s to 599-s.
Low-Temperature Bend Test Properties of Bead-on-Plate Welds—L. A. Harris, R. B. Matthiesen and N. M. Newmark, 585-s to 599-s.
Low Temperatures, Notch Impact Tests of Weld Metal at—M. Lefèvre and J. Lemoine, 122-s to 124-s.

Manganese Steels, Weldability of Austenitic—F. Danhier, 155-s to 156-s.

Nitrogen and Carbon Dioxide Atmospheres, Effect of, on Arc Welding—F. W. Sowa, W. C. Truckenmiller and L. E. Wagner, 619-s to 624-s.
Nodular Cast Iron, Welding Metallurgy of—Edward E. Hucke and Harry Udin, 378-s to 385-s.
Notch Brittleness, Scale Effects in—Yoshio Akita, 475-s to 480-s.

Peening, An Investigation on—P. L. Calamari, F. J. Crum and G. W. Place, 387-s to 402-s.
Penetration and Melting Ratio, Control of, with Welding Technique—Clarence E. Jackson and Arthur E. Shrubsall, 172-s to 178-s.
Plastic Analysis as Applied to Structural Design—Bruce G. Johnston, C. H. Yang and Lynn S. Beedle, 224-s to 239-s.
Plastic Strength and Deflections of Continuous Beams—K. E. Knudsen, C. H. Yang, Bruce G. Johnston and Lynn S. Beedle with Appendix by Walter H. Weiskopf, 240-s to 256-s.
Porosity in the Welding of Carbon Steel—Glenn W. Oyler and Robert D. Stout, 454-s to 460-s.
Postheating and Preheating of Pressure Vessel Steels—Robert D. Stout, 14-s to 22-s.
Postheating—To What Extent Does Stress Relieving Occur at 200–300° C?—R. Gunnert, 292-s to 301-s.
Preheat, Postheat and Stress Relief Treatments on Mild Steel Weldments—Ernest F. Nippes and Alexander Lesnewich, 353-s to 374-s.
Preheating and Postheating of Pressure Vessel Steels—Robert D. Stout 14-s to 22-s.
Preheating Relation to Embrittlement and Microcracking in Mild Steel Welds—A. E. Flanigan and T. Micleu, 99-s to 106-s.
Pressure Vessel Heads, Design of, Interpretive Report on—31-s to 52-s.
Pressure Vessel Research Committee Program—431-s, 440-s.
Pressure Vessel Steels—Behavior of Carbon and Low-Alloy Steels Between −20 and +650° F—G. H. Enzian, 605-s to 618-s.
Pressure Vessel Steels, Biaxial Fatigue Properties of—C. E. Bowman and T. J. Dolan, 529-s to 537-s.
Pressure Vessel Steels, Preheating and Postheating of—Robert D. Stout, 14-s to 22-s.
Pressure Vessel Steels, Resistance to Repeated Overloading—J. H. Gross, S. Tsang and R. D. Stout, 23-s to 30-s.
Pressure Vessels, Influence of Corrosion on the Cracking of—H. R. Copson, 75-s to 91-s.
Pressure Vessels, The Hydrostatic and Hammer Tests Applied to—303-s to 304-s.
Pressure Vessels, The Use of Structural Quality Steel in—I. E. Boberg, 413-s to 416-s.

Radiographs of Welds, Reference Collection of—324-s.
Recrystallization Welding—John M. Parks, 209-s to 222-s.
Research Problems, Current Welding—305-s to 315-s.
Residual Stresses, A Qualitative Study of, in Welds by Photoelasticity—Melvin Mark, 374-s to 377-s.
Resistance Welding—Multiple Contact Resistance—William B. Kouwenhoven and Donald R. Hagner, 432-s to 440-s.
Rigid Frame Structures—An Evaluation of Plastic Analysis as Applied to Structural Design—Bruce G. Johnston, C. H. Yang and Lynn S. Beedle, 224-s to 239-s.
Rigid Frame Structures—Plastic Strength and Deflections of Continuous Beams—K. E. Knudsen, C. H. Yang, Bruce G. Johnston and Lynn S. Beedle with Appendix by Walter H. Weiskopf, 240-s to 256-s

Semiautomatic Inert-Gas Metal-Arc Welding of Aluminum Alloys—Charles T. Gayley, Joseph R. Girini and Walter H. Wooding, 179-s to 190-s; Discussion—H. Udin, 385-s to 386-s; Authors' Reply, 386-s.
Ship Steel, Heat-Treatment Effects on Transition Temperature of—E. B. Evans and L. J. Klingler, 417-s to 431-s.
Ship Steel—New Specifications and Brittle Failure Research—E. F. Sweeney, 1-s to 13-s.
Ships—Considerations of Welded Hatch Corner Design—316-s to 324-s.
Ships, Investigation of Structural Failures of Welded—Morgan L. Williams and George A. Ellinger, 498-s to 527-s.
Ships—S.S. *Ocean Vulcan* Sea Trials—528-s.
Ships, Structural Failures in Welded—342-s to 346-s.
Solid Phase Welding—John M. Parks, 209-s to 222-s.
Spot-Welded Titanium Joints, Tension, Shear and Impact Strengths of—M. L. Begeman, E. H. Block, Jr., and Frank W. McBee, Jr., 599-s to 604-s.
Stainless Steel—Copper in Type 347 Weld Metal—R. P. Wentworth, 347-s to 351-s.
Stainless Steel—The Incidence of Cracking in Welding Type 347 Steels—L. K. Poole, 403-s to 412-s.
Stainless Steels—Stabilizing Austenitic Chrome-Nickel Weld Metal Against Intergranular Corrosion—Hallock C. Campbell, 577-s to 584-s.

Statistical Analysis of Behavior in the Transition Temperature Zone—R. W. Vanderbeck, H. D. Wilde, R. W. Lindsay and C. Daniel, 325-s to 332-s.
Steel—Structural Quality for Pressure Vessels—I. E. Boberg, 413-s to 416-s.
Stress Concentrations in Steel Under Cyclic Load; Discussion—N. H. Polakowski, 222-s to 223-s; Author's Reply, 223-s, 256-s.
Stress Corrosion Cracking of Welded Low-Alloy Steels—E. Baerlecken and W. Hirsch, 576-s.
Stress Relieving at 200–300° C—R. Gunnert, 292-s to 301-s.
Structural—A Proposed Investigation on Wedge Beams—453-s.
Structural Design, An Evaluation of Plastic Analysis as Applied to—Bruce G. Johnston, C. H. Yang and Lynn S. Beedle, 224-s to 239-s.
Structural Failures in Welded Ships—342-s to 346-s.
Structural Failures of Welded Ships—Morgan L. Williams and George A. Ellinger, 498-s to 527-s.
Structural—Fatigue Tests of Steel Girders—Hans Bühler, 52-s to 54-s.
Structural—Plastic Strength and Deflections of Continuous Beams—K. E. Knudsen, C. H. Yang, Bruce G. Johnston and Lynn S. Beedle with Appendix by Walter H. Weiskopf, 240-s to 256-s.
Structural Steel Beams with Butt-Welded Splices, Transition Temperatures of—William J. Krefeld and George B. Anderson, 538-s to 576-s.

Temper Brittleness in Low-Alloy Steel Weld Metal; Discussion—W. S. Pellini and P. P. Puzak, 107-s to 109-s; Discussion—D. C. Smith and W. G. Rinehart, 110-s; Authors' Reply, 110-s to 111-s.
Titanium Alloys, Practical Aspects of Welding—J. J. Chyle and I. Kutuchief, 65-s to 73-s.
Titanium, Effect of Alloying Elements on Welds in—G. E. Faulkner, G. B. Grable and C. B. Voldrich, 481-s to 497-s.
Titanium, Effect of Atmospheric Contaminants on Arc Welds in—J. C. Barrett, I. R. Lane, Jr., and R. W. Huber, 283-s to 291-s.
Titanium, Effects of Carbon, Oxygen and Nitrogen on Welds in—D. C. Martin, 139-s to 154-s.
Titanium Joints, Tension, Shear and Impact Strengths of Spot-Welded—M. L. Begeman, E. H. Block, Jr., and Frank W. McBee, Jr., 599-s to 604-s.
Titanium Plate, Thermal Cycles in the Arc Welding of 1/8-In.—E. F. Nippes, J. M. Gerken, B. W. Schaaf and E. C. Nelson, 461-s to 474-s.
Transition Temperature—Deformation Twinning in Charpy V-Notch Specimens of Ingot Iron—G. W. Geil and N. L. Carwile, 273-s to 282-s.
Transition Temperature, Effect of Specimen Geometry on Impact—R. S. Zeno and J. L. Dolby, 190-s to 197-s.
Transition Temperature—Evaluation of Brittle Failure Research—E. F. Sweeney, 1-s to 13-s.
Transition Temperature—Notch Impact Tests of Weld Metal at Low Temperatures—M. Lefèvre and J. Lemoine, 122-s to 124-s.
Transition Temperature of a Ship Steel, Heat-Treatment Effects on—E. B. Evans and L. J. Klingler, 417-s to 431-s.
Transition Temperature Zone, Statistical Analysis of Behavior in the—R. W. Vanderbeck, H. D. Wilde, R. W. Lindsay and C. Daniel, 325-s to 332-s.
Transition Temperatures of Structural Steel Beams with Butt-Welded Splices—William J. Krefeld and George B. Anderson, 538-s to 576-s.
Tungsten Arcs in Argon, Helium and Their Mixtures—Merrill Skolnik and T. B. Jones, 55-s to 64-s.

Wedge Beams, A Proposed Investigation on—453-s.
Weldability—Controlled Thermal Severity Cracking Test Simulates Practical Welded Joints—C. L. M. Cottrell, 257-s to 272-s.
Weldability—Cylinder Specimen for Testing the Cracking Tendency of Steels and Electrodes—Paul Werthebach, 302-s.
Weldability—Decomposition of Austenite in Low Carbon, Ni, Mo, Steel Weld Metal—E. F. Bailey and W. J. Harris, Jr., 134-s to 138-s.
Weldability—Embrittlement of High-Strength Ferritic Welds; Discussion—Hallock C. Campbell and Richard P. Wentworth, 73-s to 74-s.
Weldability—Mechanics of the Explosion Bulge Test—Carl E. Hartbower, 333-s to 341-s.
Weldability of Austenitic Manganese Steels—F. Danhier, 155-s to 156-s.
Weldability—Relation of Preheating to Embrittlement and Microcracking in Mild Steel Welds—A. E. Flanigan and T. Micleu, 99-s to 106-s.
Weldability—Studies of the Crack Sensitivity of Aircraft Steels; Discussion—J. Koziarski, 157-s to 159-s; Authors' Reply, 159-s; Discussion—E. C. Rollason and R. R. Roberts, 159-s to 160-s; Authors' Reply, 160-s.
Weldability—Temper Brittleness in Low-Alloy Steel Weld Metal; Discussion—W. S. Pellini and P. P. Puzak, 107-s to 109-s; Discussion—D. C. Smith and W. G. Rinehart, 110-s; Authors' Reply, 110-s to 111-s.
Weldability—The Role of Weld Metal Area in Welding Hardenable Steels—C. R. McKinsey and J. F. Collins, 125-s to 131-s.
Welding Technique, Control of Penetration and Melting Ratio with—Clarence E. Jackson and Arthur E. Shrubsall, 172-s to 178-s.

Zirconium, Ductile Welding of—F. G. Cox, 92-s to 98-s.

WILLIAMS, MORGAN L.—Investigation of Structural Failures of Welded Ships, 498-s to 527-s.
WOODING, WALTER H.—The Semiautomatic Inert-Gas Metal-Arc Welding of Aluminum Alloys, 179-s to 190-s.

YANG, C. H.—An Evaluation of Plastic Analysis as Applied to Structural Design—Progress Report No. 8 on Welded Continuous Frames and Their Components, 224-s to 239-s.
Plastic Strength and Deflections of Continuous Beams—Progress Report No. 9 Welded Continuous Frames and Their Components, 240-s to 256-s.

ZENO, R. S.—The Effect of Specimen Geometry on Impact Transition Temperature, 190-s to 197-s.

WELDABILITY OF STEELS

An outstanding summary of current knowledge of the Weldability of Carbon & Low Alloy Steels prepared by Drs. R. D. Stout and W. D'Orville Doty under the direction of the Weldability Committee of the Welding Research Council.

Book of 381 pages including tables for welding ASTM, SAE, ABS and other specification Steels in all thicknesses.

List Price $6.50. A 20% discount to members A.W.S. Limited Edition. Order your copy now!

AMERICAN WELDING SOCIETY
33 West 39th Street
New York 18, N. Y.

AN OPPORTUNITY

—is presented to all AWS Membership and Industry to secure back numbers of The Welding Journal Bound Volumes at very low cost.

Effective now, a limited supply of the following BOUND VOLUMES are available at the prices shown

Year	Price	Year	Price
1930	$6.00	1938	$6.00
1931	6.00	1948	10.00
1932	6.00	1950	12.00
1933	6.00	1951	12.00
1934	6.00	1952	12.00
		1953	15.00

Foreign postage additional

Each consists of the twelve (12) issues of that year's JOURNALS, each volume attractively bound in imitation black leather covers. These are valuable additions to your engineering and welding library.

Place order now with the AMERICAN WELDING SOCIETY, 33 West 39th Street, New York 18, N. Y. Add 3% sales tax on N.Y.C. orders.
